

"The mantle spans five temperature layers: cool (500-800°C, blue) near the lithosphere; warm (800-1,200°C, green) in the transition zone; hot (1,200-1,600°C, red) in the deeper upper mantle; very hot (1,600-2,200°C, orange) in the lower mantle; and superheated (>2,200°C, purple) near the core-mantle boundary."

"Highlight only the hot mantle in bright yellow with enhanced lighting."

"Only the hot mantle is visible, now shown in yellow with a zoomed-in view."

"The view and all color and opacity settings have been reset to default. The scene is now stylized to resemble a Black Forest cake."

"Reset all settings and apply a stylization that makes the mantle layers resemble a Black Forest cake."
